FAO 1 - The State of Food Security and Nutrition in the World - 2019

This year's report presents evidence that the absolute number of people who suffer from hunger continues to slowly increase. The report also highlights that food insecurity is more than just hunger. For the first time, the report provides evidence that many people in the world, even if not hungry, experience moderate food insecurity as they face uncertainties about their ability to obtain food and are forced to compromise on the quality and/or quantity of the food they consume. This phenomenon is observed globally, not only in low- and middle-income countries but also in high-income countries.

FAO 2 - The State of World Fisheries and Aquaculture 2020

The State of World Fisheries and Aquaculture provides a comprehensive global overview of the sector, from fisheries and aquaculture products and their use around the world, to the livelihoods the sector supports and the consequences for the environment. With a special focus on sustainability, SOFIA's 2020 edition is a source of objective, reliable and up-to-date information for policymakers, managers, scientists, stakeholders - and indeed everyone interested in the fisheries and aquaculture sector.

FAO 3 - The State of the World's Forests

Forests are home to most of the earth's terrestrial biodiversity, yet deforestation and forest degradation continue at alarming rates. This report gives a comprehensive overview of the state of the world's forests today, including the livelihoods they offer to rural communities and the species contributing to our forests' incredible biodiversity. This interactive story also explores the future of forests and the ways in which we can ensure their sustainability, protecting them for future generations.

FAO 4 - Global Forest Resources Assessment

Did you know that forests cover nearly 1/3 of land globally? The Forest Resources Assessment 2020 examines the status of, and trends in, these forest resources across 236 countries and territories from 1990–2020. The information provided is a broad overview of the world's forests and the ways in which the resource is changing. Such a clear global picture supports the development of sound policies, practices and investments affecting forests and forestry.

FAO 5 - Hidden in plain sight

Trees, forests and land use in drylands: the first global assessment

Drylands cover 41 percent of the Earth's land surface. This report – the first of its kind - demonstrates that drylands are productive landscapes with considerable economic potential and environmental value. Trees and forests in drylands also provide habitats for biodiversity, and help increase the resilience of landscapes and communities in the face of global change. The report was carried out through interpretation of satellite images by more than 200 experts.

FAO 6 - Resources, Partnerships, Impact - 2019

The second edition of FAO's annual report on partnerships, results and achievements seeks to communicate, in a transparent and accountable way, who FAO is, what we do, and how we work with our partners and diverse United Nations agencies to achieve the Sustainable Development Goals (SDGs). To reach the ambitious targets set in the 2030 Agenda and lead global efforts to defeat hunger (SDG 2), continued investments and collective action will be absolutely critical. FAO, together with its partners, is tackling pressing and complex challenges every day – challenges calling for urgent actions that leverage FAO's unique experience, knowledge and technical expertise.

FAO 7 - The State of Food and Agriculture - 2019

Moving forward on food loss and waste reduction

This report provides new estimates of the percentage of the world's food lost from production up to the retail level. The report also finds a vast diversity in existing estimates of losses, even for the same commodities and for the same stages in the supply chain. Clearly identifying and understanding critical loss points in specific supply chains – where considerable potential exists for reducing food losses – is crucial to deciding on appropriate measures. The report provides some

guiding principles for interventions based on the objectives being pursued through food loss and waste reductions, be they in improved economic efficiency, food security and nutrition, or environmental sustainability.

FAO 8 - Tracking progress on food and agriculture-related SDG indicators - 2019

In the first digital SDG progress report of its kind, FAO presents key data and trends for 18 of the 21 indicators under its custodianship. The evidence available to date for these targets, however, paints a grim picture. The world is not on track to meeting the overwhelming majority of SDG targets related to sustainable agriculture, food security and nutrition. This report is meant to help countries get back on track in their efforts and to highlight the importance of data and reporting in achieving these objectives.

FAO 9 - The State of the World's Biodiversity for Food and Agriculture 2019

Biodiversity is essential to food and agriculture; yet, it is declining worldwide. The State of the World's Biodiversity for Food and Agriculture presents the first global assessment of biodiversity for food and agriculture worldwide. Biodiversity for food and agriculture is the diversity of plants, animals and micro-organisms at genetic, species and ecosystem levels, present in and around crop, livestock, forest and aquatic production systems.
